Volatile Organic Compounds (VOCs)	No	Yes	Yes	Yes

There can be color variation in material from different batches. It is advised to use same batch material to avoid colour variations actual colour of the laminate sheet may very form this brochure.

we want this type of presentation image so image need to be change, text should be same but need to change direction and sequence.

Reson for Air Bubble Formation on Laminates	Causes of Yellow Patches and Color Fading After Installation
 Laminates are bonded in Extremely humid conditions	 Exposure to direct sunlight can gravely affect a laminates appearance
 Use of water based synthetic resins Adhesive any other then peva (Polyethylene vinyl acetate co-polymer)	 Use of inferior or substandard dipped plywood or dipped lipping patti, which may chemically react with the adhesive
 When substrate loses Moisture after installation	 The use of synthetic rubber adhesives such as SR / Jat Pat, Bostic, Heatx, etc
 Debonding in certain areas because of uneven substrate surface	 Prolonged exposure to high temperature (Above 30 C - 35 o C)
 Use of extremely large acrylic/PVC laminate sheets (more than 8 ft x 2 ft long)	 If hot cookware or utensils are directly placed on the laminate
 Insufficient or lack of pressing during the bonding period of laminate	We highly recommend to paste acrylic sheet on MDF surface, for good finishing & to avoid fitting issues.  To avoid inside crack and stretch lines do not store acrylic sheet in the roll form

DO'S & DONT'S

- Store the laminates below 30 C temperature. To avoid the inside cracks & stretch line, do not store acrylic sheet in roll form.
- Clean the surface of laminate with water and clean, non-abrasive cloth. We recommend cleaning with COLIN glass cleaner and soft micro fibre cloth.
- Glossy surfaces recommended to use in vertical applications.
- Do not use alcohol based cleaners, solvent, petrol or oil as these may damage the surface of the laminate. Do not use cloth other than micro fibre.
- Do not use thinner on the surface of other laminates.
- Do not place hot cookware directly on the laminate as the exposure to temperatures above 30 C may cause damage to the laminate surface.
- Outdoor application of the laminate with exposure to direct sunlight and weather conditions area strict not recommended. UV rays may de-shapde the laminates.
